

TRIPLE HUMANIZED CD3 MOUSE

hCD3EDG

Bispecific T Cell Engager Development

STRAIN SNAPSHOT

Model Name	hCD3EDG
Catalog Number	NM HU 220120
Humanized Genes	CD3E, CD3D, CD3G
Zygoty	Homozygous

Repository Live — Ready to Ship

FEATURED MODEL OF THE MONTH

WHY TRIPLE CD3 HUMANIZATION?

Full CD3 Complex Humanization

- Accurate human epitope presentation, including interfaces at epsilon/delta and epsilon/gamma
- Physiologic ITAM-based signal transduction through a properly assembled CD3 complex
- Translatable cytokine release profiles in an immunocompetent, syngeneic system
- Preserved immune architecture, including normal T cell development and subset distribution

IMMUNE ARCHITECTURE

WT C57BL/6 vs HO hCD3EDG Flow Cytometry

Fig. 1: Normal immune composition maintained while expressing functional human CD3 on T cells.

VALIDATION: TUMOR EFFICACY READOUTS

In Vivo Efficacy

Homozygous hCD3EDG mice bearing syngeneic tumors demonstrate strong antitumor responses with bispecific T cell engagers targeting human CD3.

Anti-CD3 x EpCAM Bispecific

MC38 hEpCAM syngeneic tumor model

83% TGI

Anti-CD3 x Claudin18.2 Bispecific

MC38 hCLDN18.2 syngeneic tumor model

83% TGI

0.3 mg/kg: 63% TGI (p < 0.05) | 1.0 mg/kg: 83% TGI (p < 0.01) – dose-dependent efficacy
